## Target Location

## Target category

Unspecified

## VRT (VULNERABILITY RATING TAXONOMY)

Sensitive Data Exposure > Disclosure of Secrets > For Publicly Accessible Asset

## Priority

**P1** Suggested priority based on the identified VRT

## Bug URL

<https://github.com/NiluK/ethGlobal-game/blob/474897c32aebbf1a6760167a64d4b727fc087459/.env#L6>

## Description

Sensitive Token Exposed in GitHub

Overview of the Vulnerability

There is an Exposure of tokens in the repositories of the given GitHub URL.

An attacker can use the credentials to access the privileges of the API Key owner and will be also able to make unauthorized requests.

Steps to Reproduce

1. Go to the following repository:  
<https://github.com/NiluK/ethGlobal-game/blob/474897c32aebbf1a6760167a64d4b727fc087459/.env#L6>
2. Here you can see the API Keys and Passwords .

### Impact

An attacker can access the Mongo Atlas Database as well as the Alchemy key is also exposed. Private Key is also exposed.

### Proof of Concept (PoC)

The following screenshot shows the sensitive token exposed:

Hi SUD0xSatya,

Thank you for your submission. Unfortunately, we have received this report from another researcher. Therefore, it is considered a duplicate issue. Your effort is appreciated and we hope that you will continue to research and submit any future security issues you find.

If this is a paid program, points for this submission will be awarded when the submission that you're duplicated against moves to a final state, if the priority is P1 or P2. If that submission is marked as `not applicable`, or this submission is in a VDP (unpaid) program, then no points will be awarded as these aren't awarded on submissions of this state.

Best regards,

- mehmet\_bugcrowd
